

# FLICK-FLACK

## NOTE

NEATNESS & ACCURACY is most important to make sure that your flick-flack works properly.

Cut out the 4 rectangles on the right. Fold them (or score them) along the dotted lines (so that each piece folds both ways).

Place the 2 rectangles with circles on a flat surface side by side vertically (see the diagram below).

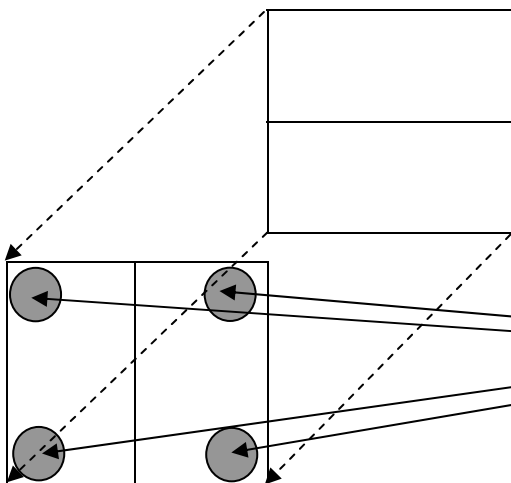

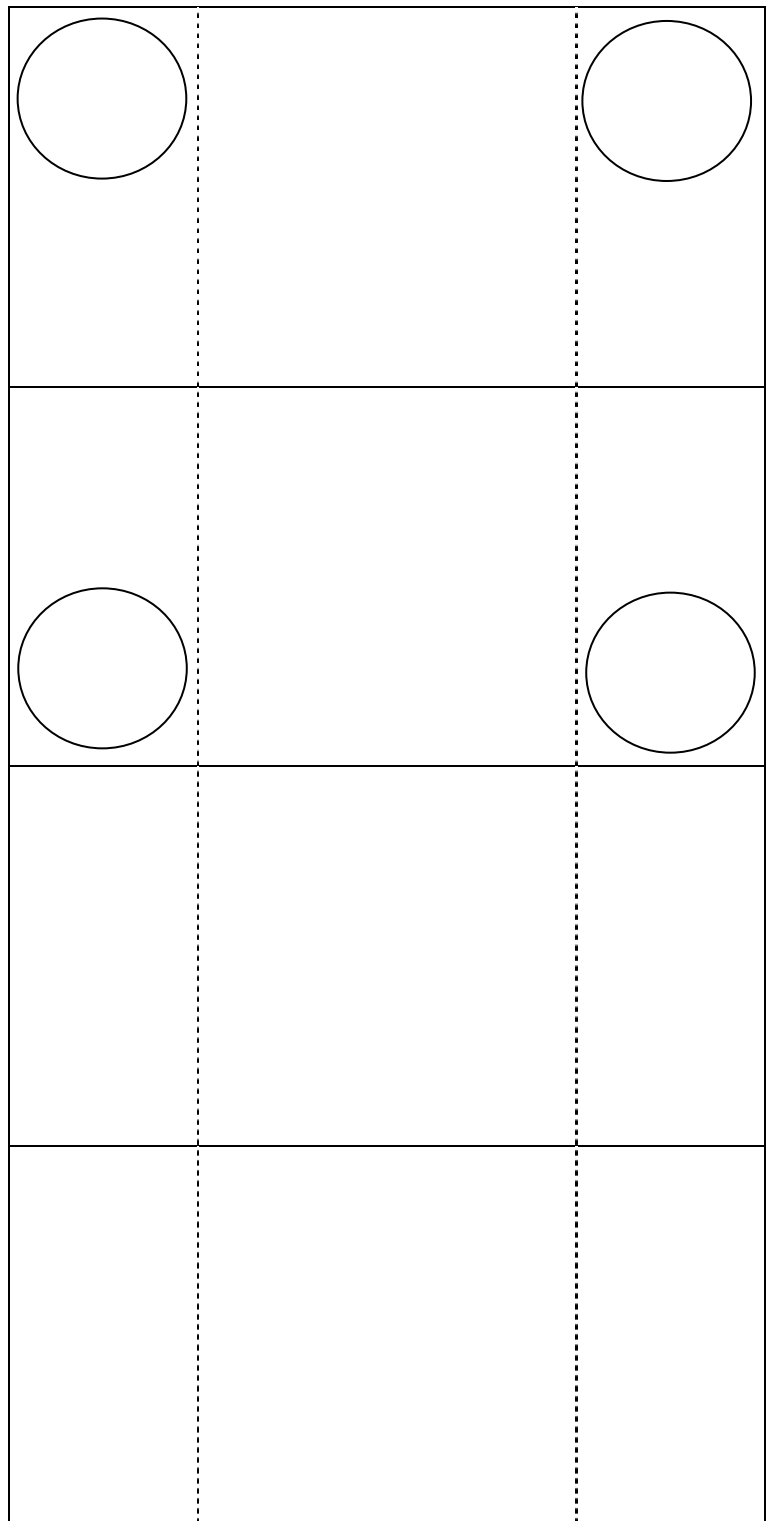

Carefully put glue on the four circles - (as shown in diagram below).

Place the other 2 rectangles across them - but horizontally this time (see diagram).

Allow the glue to set properly.

Your flick-flack is ready to use.

Colour it - or add a design.

### **How to use your "flick-flack"**

Turn the flick-flack so that the parts facing you are vertical. Open up both sides together, so that they fold underneath. Turn the flick-flack through 90 degrees. Open up both "middle parts" sideways so that they fold underneath. (It now looks a bit like a cross.) Turn through 90 degrees – fold under again. Turn & fold under ... etc.

Glue the four corners
